## The Injector

The Injector dispenses additives into your water at a consistent rate.

You can Soft Wash or WFP Window Clean more effectively. Save on water & chemicals!

Connect straight to the tap or after your RO/Di system or vehicle pure water tank & pump.

### Instructions:

Open the cap on the filling spout or unscrew the blue canister to access the soap reservoir

Never pressurise when empty!

Doses at a ratio of 200:1. **The Injector** has a capacity of 1.1 litres & will therefore dose 220 litres of water with any liquid additive.

## Vision - Pure Water Additive

Together with [jigsaw-innovations.co.uk](http://jigsaw-innovations.co.uk), **Vision** was developed to improve the speed & effectiveness of pure water wfp window cleaning.

The 'DownUnder' version of **Vision** that we sell was developed especially for our conditions. With less frequent cleaning schedules than the UK & high pollen & dust concentrations we needed a formula that works for us.

**Vision** is designed to have a more powerful cleaning action & create a hydrophilic effect on the glass making washing & rinsing much quicker.

The results are cleaner glass with a shine your clients will notice & you can be proud of.

### Instructions:

Shake before use

We recommend a dose ratio of 10ml per 100 litres of pure water. A half dose rate of 5ml per 100 litres is still effective.

You should see some suds on the glass.

**DO NOT disturb the injector during use.** That way the small amount of water that is added gently during use will not mix with the remaining soap too much and dilute the solution.

If used in **The Injector** dilute at a ratio of 20ml to 1 litre of water.

**Vision** may raise the TDS slightly by 005ppm this will not cause spotting
